Milk & Dairy DNA Testing

**FAST & SPECIFIC
DNA TESTING**

dnature[®] test milk, milk powder & dairy products using two unique DNA tests:

MilkID[™]

- Confirms the species the product is derived from
- Detects & quantifies the level of any contaminating species eg bovine contamination in sheep milk

A2Pure[™]

- Measure the level of A1 & A2 casein DNA in milk – quantifying the % of A1 contamination

dnature[®] testing means:

- Assurance that milk supplies are as expected
- The ability to monitor CIP (clean-in-place) protocols
- Contamination issues can be detected and quantified
- Securing provenance of milk, milk powder or dairy products before it leaves for market

dnature[®] tests are new to market for the dairy industry.
